I, Adrian Turulski, operating under the **Turulo** brand, provide the owner or the person authorized to manage **yourwebsite.com** with the following security and responsibility declaration.

What I declare

- I act only within the agreed scope.** I use only the access, data and permissions necessary for diagnosis, repair or other technical work related to the request.
- I protect access and confidentiality.** I do not share login details with third parties, do not use them for any other purpose and keep them stored securely for the time needed to complete the work.
- I secure the starting state.** If the nature of the work requires it, I make a safety backup before changes or make sure there is a safe way to restore the previous state.
- I work with due care.** I do not introduce changes beyond the agreed scope and I take care of the integrity of the website, data and configuration.
- I take responsibility for the scope of my actions.** If my actions cause a technical issue, I will immediately take corrective action and restore the proper operation of the website, or a state as close as possible to the state before the change.
- After the work is finished, I close access operationally.** I do not use the provided access outside the execution of the request, and I recommend changing passwords, refreshing access or closing temporary accounts after the work is completed.

This declaration defines my operating standard when entering the website and my responsibility for the scope of my actions. If needed, it may be supplemented with a separate agreement or a data processing agreement.
